

## Shadow Photo Challenge

Look at the different photographs of shadows.

Look how the shadows all appear in different places. This is because the light, or sun, is shining from a different direction before the photo is taken.

### **Your challenge:**

Create your own shadow photographs using yourself or your family. You could also try using things you can find in your house, garden or on a local walk.

You could explore how the shadows change when you move into different positions to take the photograph.
